Apply filters to SQL queries

Project description

In this project, I will demonstrate the use of SQL filters. First I will filter a database for dates and times, then I will use the LIKE filter to find specific patterns. Lastly I will demonstrate the concept of conditional filtering using the AND, OR, and NOT filters.

Retrieve after hours failed login attempts

I will begin by running the following query against the log_in_attempts table in the organization
database:

```
SELECT * FROM log in attempts WHERE login time > '18:00' AND success = 0;
```

This will allow me to filter for all failed login attempts made after 18:00, outside of normal business hours. I have chosen to use the numerical value of 0 to represent failed logins.

Retrieve login attempts on specific dates

My next query will use the OR operator to filter for all login attempts for two dates:

```
SELECT * FROM log_in_attempts WHERE login_date = '2022-05-09' OR login_date =
'2022-05-08';
```

And the output now displays both successful and failed login attempts for May 8th and 9th, 2022.

Retrieve login attempts outside of Mexico

Now I will run a query using the NOT operator to exclude login attempts that originate in Mexico:

```
SELECT * FROM log in attempts WHERE NOT country LIKE 'MEX%';
```

Note that the output from the previous query includes 'MEX' and 'MEXICO' in the country column, so I must use the keyword LIKE to filter for the common pattern that exists in the two values.

+	username	+ login date	+ login time	 country	+ ip address	++ success
+	username			+		++

Retrieve employees in Marketing

Now, I will query the <code>employees</code> table to obtain records for the employees in the Marketing department who work in all offices in the East building:

+	device_id	username	department	++ office
1000	a320b137c219	elarson	Marketing	East-170
1052	a192b174c940	jdarosa	Marketing	East-195

Summary

This is a short demonstration on how to not only use SQL, but also operators like $\overline{\texttt{AND}}$, $\overline{\texttt{OR}}$, and $\overline{\texttt{NOT}}$ to filter for results tailored to an organization's needs.
